

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 22, line 2, with the following rewritten paragraph.

-- A damper housing 22 is formed of an elastic wall portion 22a made of a butyl rubber and an outward flange 22b is fixed to a lower surface 21a of the resin portion 21 through vulcanization bonding. Further, a lid member 23 is fixed with adhesives to an upper surface 21b of the resin portion 21, whereby under the condition that the viscous fluid 24 is filled in the interior, the interior of the damper housing 22 is hermetically sealed and the vibration preventing damper 20 is formed integrally with the chassis 19. --
